

About the Index Map

This map shows the general location of shorelines and associated shorelands subject to the Clallam County Shoreline Master Program (SMP) update being prepared under RCW 90.58, and the index for Draft Shoreline Environmental Designations (SED's) maps. Shorelines are streams (or segments thereof) with a mean annual low of 20 cubic feet per second, lakes greater than 20 acres, and marine waters, together with their underlying lands and associated shorelands. Shorelands under the Draft SMP include: those lands extending 200 feet from the ordinary high water mark; the mapped floodway and 100-year floodplain; associated wetlands; and other critical areas (e.g., smaller streams, landslide hazards) overlapping the shorelands jurisdiction and their buffers. The County SMP does not apply to lands held in trust by the United States for Indian Tribes, within the boundaries of the Olympic National Park, or within the cities of Sequim and Port Angeles.
